

NEW FAST TRACK SERVICE FROM MOOG HELPS COMBAT EXPENSIVE DOWNTIME PRESSURES

MOOG'S NEW FAST TRACK SYSTEM CUTS DOWNTIME

Fast Track...On time...Everytime

Recognising that minimal machine downtime is key to maximising operational metrics like RONA (return on net assets) and ROCE, (return on capital employed) our Fast Track Repair service gives companies a vital edge in delivering the quickest possible turnaround for essential production performance.

Fast Track's customised priority management system, gives you the ability to raise the priority of specific units above and beyond the various levels of repair turnaround cycle times currently achieved.

When a returned product is assigned to the Fast Track system, the priority level is automatically raised within Moog's existing repair programme and at this stage, an estimate of return time is given.

With Fast Track, Authentic Parts are re-designated and kitted in a unique way, adhering to lean and optimised industrial processes, to ensure we meet our own rigorous expectations with regard to quality. The parts are then assigned to a dedicated team whose responsibility it is to re-manufacture the unit to exacting tolerances within (often) the tightest of deadlines.

- ◆ Full remanufacturing capability
- ◆ Uses Moog authentic components
- ◆ Units are tested to "as-new" condition
- ◆ Predictable delivery performance
- ◆ Can reduce the need to hold excess stock for non critical applications
- ◆ Reduces downtime costs
- ◆ Improves production output

Authentic Repair - increases the reliability and efficiency of your machinery

Modern CAD and analysis capabilities have given engineers access to a vast array of testing capabilities which are able to generate data that in the past, could only be obtained from monitoring operational performance over extended periods of time.

These capabilities gives our design engineers a deeper insight into how components interact with each other, and how their day-to-day operation will be affected by varying degrees of process and environmental conditions.

It follows therefore, that the original equipment manufacturer is the only complete source of information with regards to any repair activities.

Not only do we know the original design and test specifications of the product, we also know through rigorous evaluation, how the current performance relates to factors such as wear patterns, component fatigue, tolerances and revised performance capabilities.

Authentic Repair - by far the most cost effective route

Life testing is a vital part of any product development programme. The ability of a supplier to make an assessment based on actual performance, versus the original specification, allows the original manufacturer to make the well informed and accurate judgments that are simply out of reach to third parties.

Not only can we interrogate these results and use them to gauge the cause of failure or wear, it can also suggest the best possible course of remedial action.

Fast Track – a complete solution

Downtime is expensive for any company, so realistic timetables are essential to allow companies to factor in repair schedules. Our global product experience means that repairs can be performed to tight deadlines.

You will know that after the repair, your machine or process will run trouble free, and likely, with a far lengthier timeframe than you would get using a third party.

Our Fast Track Service gains you an advantage with rapid transit through our customised Repair Facility in Tewkesbury, where our dedicated Fast Track staff are on hand to deliver high performance product build and repair. All of this is supported by a focused team of our manufacturing engineers, designers and supply chain management specialists.

All this to bring you the product you want, when you need it.
