

5 Ways Moog global support can boost your machine productivity

Here are five ways Moog Global Support can boost your machine productivity starting today.

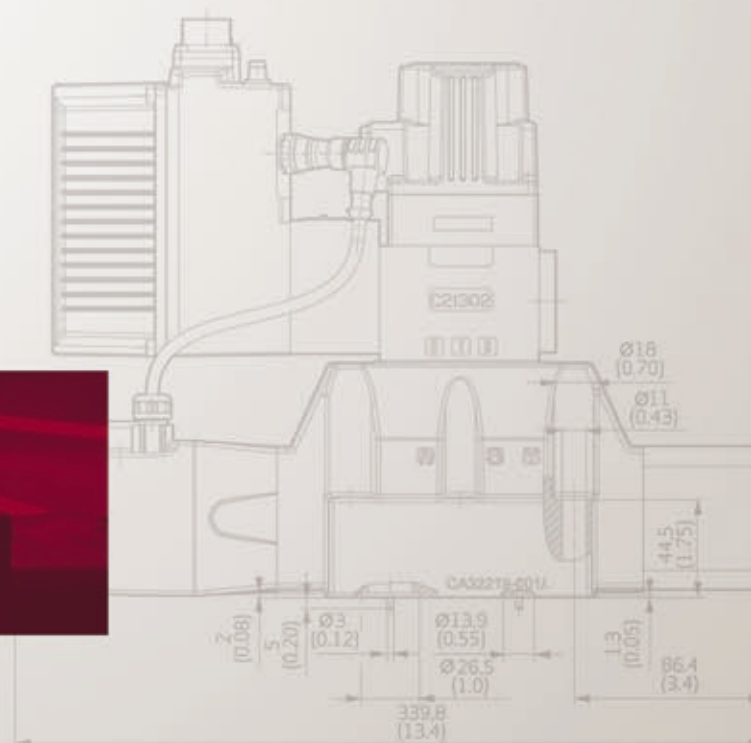

Every day, the demands on your machines continue to grow. Machines must work harder, faster, longer and more cost-effectively than ever before. Yet as productivity demands increase, so does the potential for unforeseen downtime.

That's why we created Moog Global Support®. It's our commitment to keeping your critical machines working at peak performance by focusing on high quality servo valve maintenance and support. Around the globe, local teams of trained Moog technicians are there for you with a variety of services designed to maximise uptime and help you get more from your machine investment.

Like-new performance

There is a big difference between servo valve repairs from a generic repair house and those made by Moog factory-trained technicians. Moog experts use only authentic Moog OEM replacement parts for like-new performance after every repair. In fact, we are the only repair facility that will replace defective parts with new Moog replacement parts.

Additionally, we frequently update older components to the latest configuration to ensure your machine will operate at maximum efficiency and match the performance of a brand new valve. And because we have access to Moog factory documentation, we can pinpoint and repair even the smallest performance issues before they become costly problems.

High-quality repairs

No matter where you operate, Moog local repair technicians offer consistent quality support anywhere in the world. In addition to providing extra technical know-how, this service ensures thorough and comprehensive failure analysis, and a repair documentation process that clearly states what the performance issue is, what components are being repaired and how functionality has been restored.

We maintain hazardous location certifications in accordance with ATEX, CSA and FM standards that allow Moog technicians to repair intrinsically safe and explosion-proof hardware.

Moog technicians work collaboratively with customers to determine the root cause of failure, recommend system improvements and maintenance programs aimed at decreasing downtime, minimising repair costs and increasing productivity.

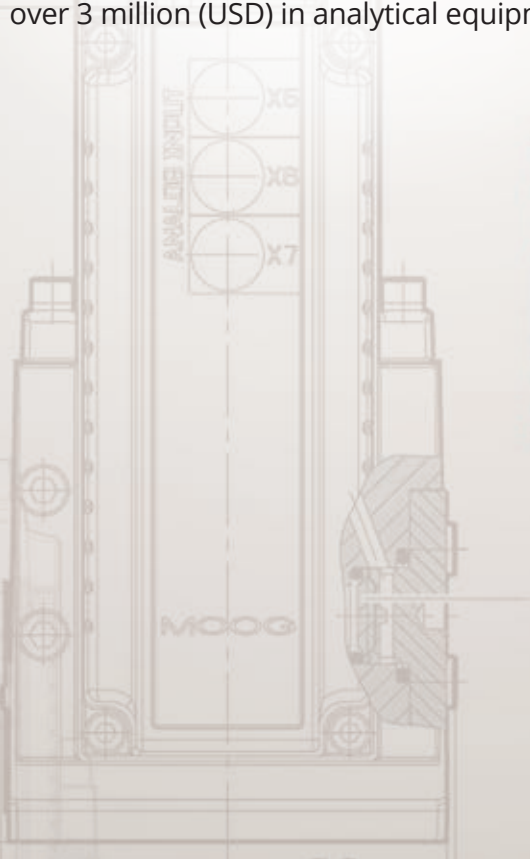

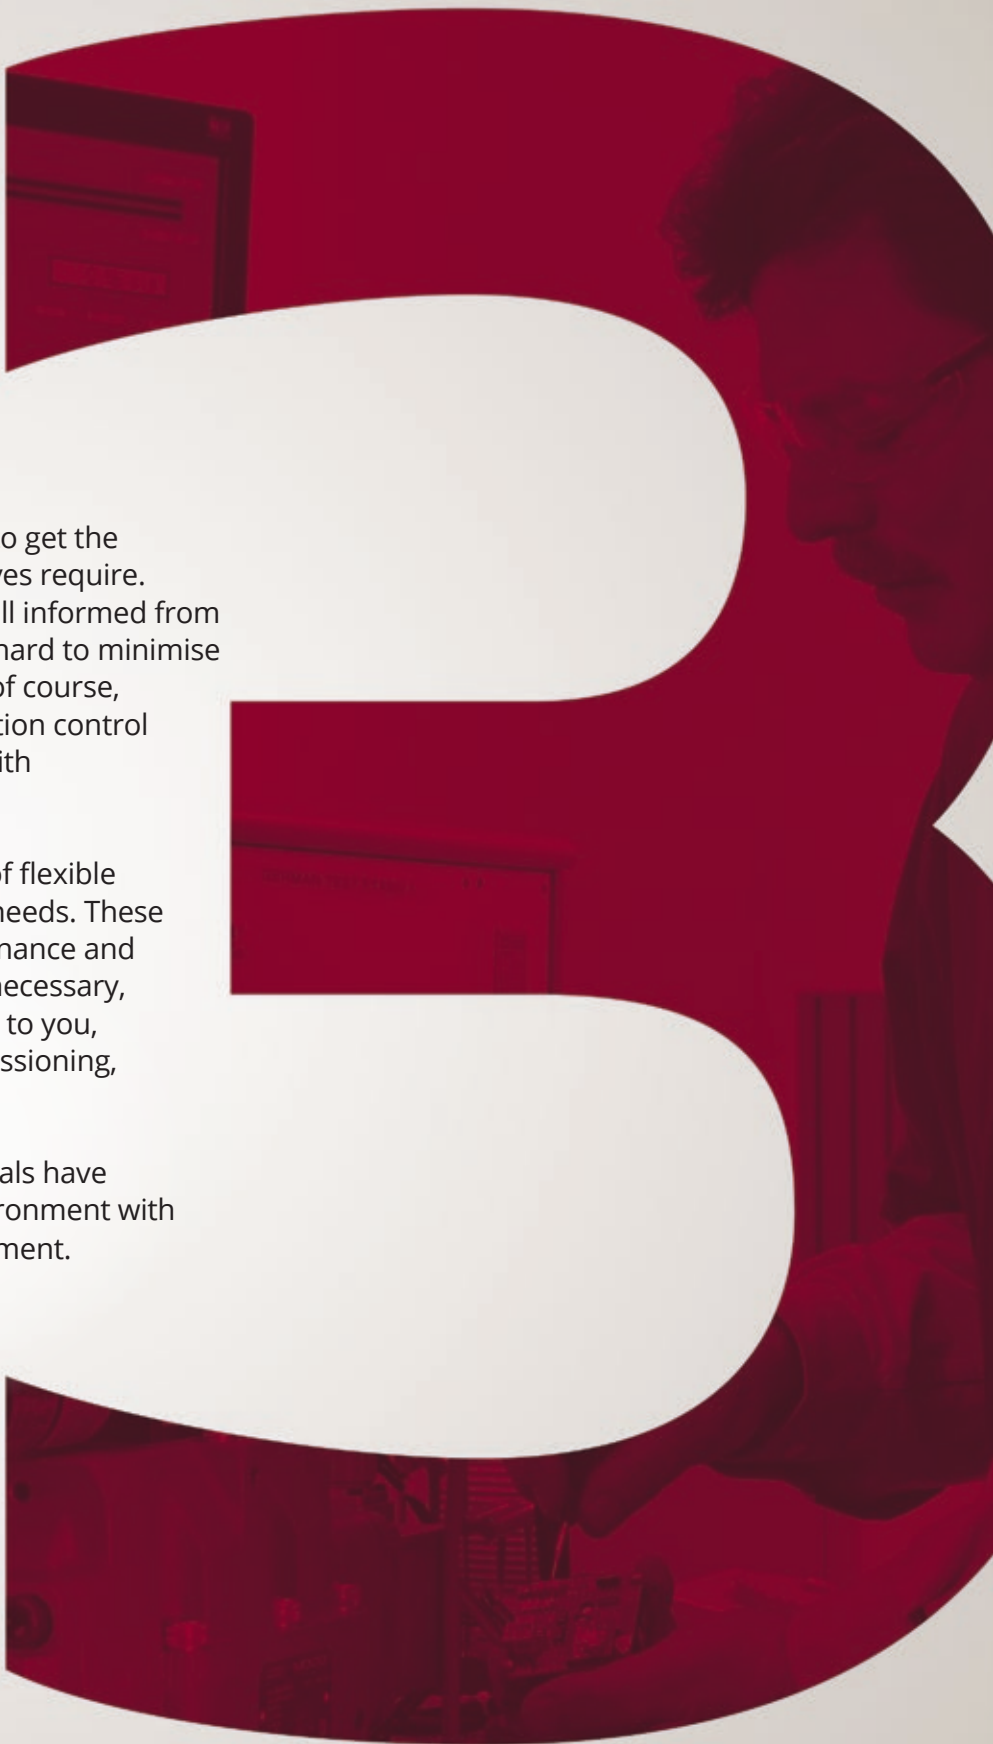

Technical support and expertise

Moog Global Support makes it simple to get the maintenance or repairs your servo valves require. Our streamlined process keeps you well informed from scheduling through delivery. We work hard to minimise downtime on scheduled repairs. And, of course, we deliver an unsurpassed level of motion control experience and technical knowledge with every interaction.

Our expert technicians offer a variety of flexible programs tailored to your equipment needs. These include upgrades, preventative maintenance and annual or multi-year contracts. When necessary, Moog on-site services deliver expertise to you, providing quick and convenient commissioning, set-up and diagnostics.

In fact, Moog's global repair professionals have access to a world-class laboratory environment with over 3 million (USD) in analytical equipment.

The Moog factory repair difference

Since inventing the first commercially-viable servo valve more than 60 years ago, Moog has built a reputation for engineering world-class motion control products. Moog Global Support reflects this commitment to quality in every servo valve repair we make. Here is one real-world example of just how seriously we take this commitment.

Servo Valve Repair

As Unauthorised Repair Houses do not have access to authentic Moog parts, the quality of the repair may be limited to the effectiveness of their cleaning process. The valve on the left was cleaned by the URH. Material build-up can break free, prematurely clogging the small orifices shown in this photograph. Moog would replace the component as shown on the right.
